Name Chapter 1--Objectives and Tools of World Regional Geography

Description

Instructions

[◀ Add Question Here](#)

Question 1 **Multiple Choice**

Question Which is not one of National Geographic's six essential elements of geography?

- Answer**
- Environment and society
 - Human systems
 - ✓ GIS, remote sensing, and cartography
 - Physical systems
 - The world in spatial terms

[◀ Add Question Here](#)

Question 2 **Multiple Choice**

Question Spatial relationships can best be defined as:

- Answer**
- The relationship between things in one specific area
 - The relationship between things that are far apart
 - ✓ Recurring patterns of things in connection with other things
 - Associations of technology and exploration on geography

[◀ Add Question Here](#)

Question 3 **Multiple Choice**

Question The term "spatial" in geography best refers to:

- Answer**
- A place in relation to other places
 - ✓ The distribution of various phenomena over the Earth's surface
 - The absolute location of an object
 - Astronomical phenomena
 - The transfer of geographic data from a globe to a flat map

[◀ Add Question Here](#)

Question 4 **Multiple Choice**

Question Large-scale maps:

- Answer** ✓ Show relatively small areas in more detail
- Are more likely to be hung on a wall than found in an atlas

Have representative fractions of 1:10,000,000 or more
Are useful for showing the entire world
Need to be shown on the Mercator projection

[◀ Add Question Here](#)

Question 5 **Multiple Choice**

Modify

Remove

Question Relative location defines a place according to its _____, while absolute location defines a place according to its _____.

Answer

- coordinate system; scale
- relationship to other places; mathematical location
- projection; representative fraction
- latitude; longitude

[◀ Add Question Here](#)

Question 6 **Multiple Choice**

Modify

Remove

Question Lines of latitude:

Answer

- Are measured in degrees, minutes, and seconds
- Are based upon the Prime Meridian
- Span 180 degrees globally
- Both a and b
- Both a and c

[◀ Add Question Here](#)

Question 7 **Multiple Choice**

Modify

Remove

Question Meridians:

Answer

- Are lines of latitude
- Include the Equator
- Are about 111 miles apart
- Are also called parallels
- Converge at the poles

[◀ Add Question Here](#)

Question 8 **Multiple Choice**

Modify

Remove

Question The Prime Meridian:

Answer

- Is the dividing line for north and south
- Is opposite from the International Date Line
- Is more important than the Equator
- Has a value of 180°;
- Divides the world into equal halves

[◀ Add Question Here](#)

Question 9 **Multiple Choice**

Modify

Remove

Question All map projections:

- Answer**
- Are equally accurate worldwide
 - Show distances accurately but distort shapes
 - Show Greenland larger than South America
 - ✓ Distort one or more properties of the map
 - Try to show longitude lines as straight as possible

◀ [Add Question Here](#)

Question 10 **Multiple Choice**

Modify

Remove

Question A map projection that shows shapes accurately over small areas is called a:

- Answer**
- Equal-area projection
 - Compromise projection
 - ✓ Conformal projection
 - Mercator projection
 - Homolosine projection

◀ [Add Question Here](#)

Question 11 **Multiple Choice**

Modify

Remove

Question Which of the following properties are always distorted during a projection?

- Answer**
- Distance
 - Shape
 - Area
 - Direction
 - ✓ Depends on the projection

◀ [Add Question Here](#)

Question 12 **Multiple Choice**

Modify

Remove

Question All conformal map projections retain accurate ____ for ____.

- Answer**
- ✓ directions; straight lines
 - area; small scales
 - distances; absolute locations
 - straight lines; longitude and latitude
 - shapes; small scales

◀ [Add Question Here](#)

Question 13 **Multiple Choice**

Modify

Remove

Question Showing different kinds of phenomena on maps is called:

- Answer**
- Representation
 - Cartology
 - Distribution
 - ✓ Symbolization

◀ [Add Question Here](#)

Question 14 **Multiple Choice**

Modify

Remove

Question Which of the following is not a line of latitude?

- Answer**
- Arctic and Antarctic Circles
 - Equator
 - Tropic of Cancer and Tropic of Capricorn
 - ✓ International Date Line
 - 5° N

◀ [Add Question Here](#)

Remove

Question 15 **Multiple Choice**

Question The region (as defined in this book) with the largest population is:

- Answer**
- Latin America
 - Africa South of the Sahara
 - Russia and the Near Abroad
 - Europe
 - ✓ Monsoon Asia

◀ [Add Question Here](#)

Remove

Question 16 **Multiple Choice**

Question A map which defines size and shape in proportional relationship to a given phenomenon is called a:

- Answer**
- Choropleth map
 - Graduated symbol map
 - Projected map
 - ✓ Cartogram
 - Quantitative map

◀ [Add Question Here](#)

Modify
Remove

Question 17 **Multiple Choice**

Question A map that uses colors or shadings to represent a derived value in a political unit is called a:

- Answer**
- ✓ Choropleth map
 - Isarithmic map
 - Projected map
 - Cartogram
 - Graduated symbol map

◀ [Add Question Here](#)

Modify
Remove

Question 18 **Multiple Choice**

Question A good example of a choropleth map would be:

- Answer**
- Showing the distribution of population across a country
 - Showing rainfall amounts across a continent
 - Showing the directions from one city to another
 - ✓ Showing the percentage of college graduates in each state
 - None of these

◀ [Add Question Here](#)

Question 19

Multiple Choice

Modify

Remove

Question A collection of personal geographic information is called:

- Answer**
- Environmental perception
 - Cultural landscape
 - Personal space
 - Vernacular region
 - ✓ Mental map

[◀ Add Question Here](#)

Question 20

Multiple Choice

Modify

Remove

Question A region:

- Answer**
- is generally defined so as to incorporate as much internal variety as possible
 - is generally defined so as to resemble adjoining areas as much as possible
 - ✓ may be contained within one country or extend into more than one country
 - is always defined fundamentally on the basis of physical features
 - is always defined on the basis of a single characteristic

[◀ Add Question Here](#)

Question 21

Multiple Choice

Modify

Remove

Question ____ regions are characterized by a focus on some activity, while ____ regions are defined by the entire population sharing a certain trait.

- Answer**
- Functional; vernacular
 - Vernacular; functional
 - Vernacular; formal
 - Formal; functional
 - ✓ Functional; formal

[◀ Add Question Here](#)

Question 22

Multiple Choice

Modify

Remove

Question The regions in this book were designed around:

- Answer**
- Economic similarities
 - Homogeneous populations
 - Physical geography
 - People's perceptions of the world
 - ✓ None of these

[◀ Add Question Here](#)

Question 23

Multiple Choice

Modify

Remove

Question Regions are:

- Answer**
- Facts on the ground
 - Well-defined by boundaries
 - ✓ A generalization
 - Useless for most people
 - Only for textbooks

Question Which of the following comparisons between New Zealand and Great Britain is false?

- Answer**
- They are both island nations.
 - They have similar climates.
 - They are both peripherally located nations.
 - They occupy similar positions in the mid-latitudes.
 - Both c and d

[◀ Add Question Here](#)Question 26 **Multiple Choice**

Modify

Remove

Question The "water hemisphere" contains about ___ percent of the world's population.

- Answer**
- 2
 - 9
 - 18
 - 20
 - 33

[◀ Add Question Here](#)Question 27 **Multiple Choice**

Question "Geography" literally means:

- Answer**
- Study of Landscapes
 - Description of the Earth
 - Mapping the Earth
 - All of these

[◀ Add Question Here](#)Question 28 **Multiple Choice**

Modify

Remove

Question Geography as a whole is most concerned with:

- Answer**
- The location of places on the Earth's surface
 - The different cultures of the world
 - The natural environment
 - The relationship between people and the natural environment

The effect of the environment upon people

[◀ Add Question Here](#)

Question 29 **Multiple Choice**

Modify

Question The geographer credited with founding the landscape perspective in American geography is:

- Answer**
- Alexander von Humboldt
 - George Perkins Marsh
 - Ellsworth Huntington
 - Carl Sauer
 - David Lowenthal

[◀ Add Question Here](#)

Question 31 **Multiple Choice**

Modify

Remove

Question The landscape perspective:

- Answer**
- Was discredited with the rise of environmental possibilism
 - Stated that people are more important than the natural environment
 - Emphasized the relationship between cultural development and the physical location of that culture
 - Is a cornerstone of modern American geography
 - Led to the rise of geographic information systems

Question 35 **Multiple Choice**

Question The main advantage of GIS is:

- Answer**
- The capability to show maps on a computer screen.
 - It is an improvement over cartography and remote sensing.
 - There are more jobs available for it than other areas of geography.
 - It has multiple layers of spatial data for analysis.
 - It helps better define world regions.
